Professional Experience

ServiceLink - Software Engineer

October 2024 - Present

- Architected a feedback-loop system across 5 microservices to capture real time user corrections for **100+** AI-extracted fields, and reducing manual validation effort by **30%**.
- Engineered distributed backend services in C# (.NET Core) to process millions of external records daily, enforcing idempotency and fault tolerance , cutting end-to-end processing latency by **50% (1.94 to 0.97 days)**.
- Designed a data governance and schema mapping layer for **3 external data integrations**, implementing document expiry rules and intelligent selection policies expanding ingestion coverage by **30%** and reducing correction effort by 25%.
- Led migration from legacy extraction pipelines to agentic LLM-based models for legal and financial document datasets, improving field-level extraction accuracy by **18%** and confidence scores by **22%**.
- Delivered **\$1.1M** in annual cost savings by designing and shipping an end-to-end document processing platform , covering extraction, normalization, and validation , reducing processing time by **44%** at production scale.

Deloitte - Technology Consultant

August 2022 - April 2023

- Enhanced operational efficiency for McDonald's by integrating Angular-based admin dashboards with AWS Lambda and S3 to update and filter menu items dynamically, improving scalability, reducing API response time by **25%**, and cutting time-to-market for new offerings by **30%**.
- Optimized CI/CD pipelines using Jenkins and GitHub Actions, cutting deployment time by **40%** and ensuring smooth rollouts of Angular micro-frontends.
- Mentored 10 junior developers through internal JavaScript training sessions, increasing team delivery efficiency by **50%** through hands-on coding challenges.

Deloitte - Business Technology Analyst

August 2019 - August 2022

- Built data-driven dashboards using React, D3.js, and ChartJS to monitor operational performance for large-scale enterprise systems, reducing downtime by **25%**.
- Designed reusable data-visualization components and data pipelines that improved planning accuracy by 40% for a national health-benefits provider.
- Collaborated with engineering and business stakeholders to translate complex requirements into scalable technical solutions.
- Achieved AWS Cloud Practitioner Certification, enhancing cloud architecture, security, and reliability skills.

Deloitte - Intern

January 2019 - August 2019

- Developed IoT solutions with Thingworx, improving production tracking and automation.

Education

Carnegie Mellon University, Pittsburgh, PA
Master of Information Systems Management

August 2024

Kalinga Institute of Industrial Technology, Bhubaneswar, India
Bachelor of Information Technology

July 2015

Skills

- **Languages:** C#, Python, Java, JavaScript
- **Backend & Systems:** ASP.NET Core, Rest APIs, Microservices
- **Database Management & Cloud:** SQL Server, PostgreSQL, Cosmos DB, MongoDB, AWS, Azure
- **Frontend:** React, Angular, TypeScript, HTML5, CSS/SASS/SCSS, Vue.js
- **Tools:** AWS, VSCode, IntelliJ, Jira, Figma, Git, Postman, Jenkins, Bitbucket, Confluence,
- **Devops and CI/CD Tools:** Jenkins, Azure DevOps, GitHub Actions, Docker

Academic Projects

- **Fitconnect** Implemented a full-stack responsive fitness community platform using React and Python/Django for 1,000+ CMU students. Integrated social media, interactive challenges, and personal fitness tracking. Designed 30+ back-end endpoints with Django REST Framework and API interactions via AJAX. Integrated OAuth for secure authentication and deployed the application on Amazon EC2.
- **Exchange Rate App** Built Java service integration with real-time third-party APIs; persisted data in MongoDB Atlas; containerized with Docker; added analytics dashboards.
